

6mm Ultra Silver TV Mirror TECHNICAL SPECIFICATION SHEET

Product Code : MIRG6USTWM

Application: Cutting, Polishing,

Areas of Use: Our Reflective Ultra Silver TV mirror has been designed as an alternative option for those who seek a high level of reflectivity. This TV mirror still allows your TV to come through it but gives a better standard mirror reflection that you would expect with a normal mirror and virtually no tint.

Light transmittance = 11% (Flat Glass 90%)

Reflection (external) = 71% (Flat Glass 90%)

This higher reflectiveness causes the glass to act as a mirror under suitable lighting conditions. As a Low light TV mirror.

**NOT ONLY A GLASS MANUFACTURER, BUT
ALSO YOUR SOLUTION PARTNER...**

Type of Lighting

Avoid too much day lighting or direct lighting onto the Ultra Plus TV Mirror. Bright reflecting chrome furnishings should not be placed in direct reflection of the TV mirror.

Important Points: As this mirror gives you improved reflection and more silvered mirror finish you may need to increase the brightness of your television or reduce your environment lighting. We always suggest purchasing a sample first to ensure it is suitable for your environment as we cannot test for every situation.
